

Platform

Transforming healthcare
at the point of need

Community testing

Low cost

Portable seamless connectivity

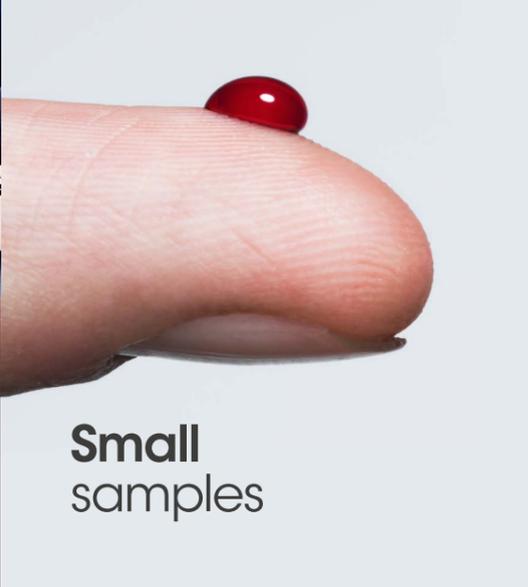

Simple intuitive workflow

Fast results in minutes

Room temperature storage

Small samples

Lab-comparable performance

One Platform. Multiple tests.

Make informed clinical decisions closer to the patient with the LumiraDx next-generation diagnostic Platform.

The Platform cost-effectively supports a broad menu of lab-comparable tests by leveraging the power of actively controlled microfluidics, providing actionable results in minutes at the point of care.

Introducing the LumiraDx Platform

The LumiraDx Platform is an integrated system of products working together to provide smart, next-generation diagnostic testing by simplifying, and scaling down principles used in lab systems to a single solution that is:

- FAST**
- EASY TO USE**
- ACCURATE**
- COST EFFICIENT**

The Platform includes a small, lightweight, portable Instrument; actively controlled microfluidic Test Strips; one simple workflow; and seamless, secure digital connectivity to hospital IT systems.

One Platform

No need for multiple diagnostic instruments, this single, easy to use, portable Instrument has a simple and consistent workflow for all tests and is designed for intuitive use - simply follow the onscreen video display for high-sensitivity results in minutes.

INSERT TEST STRIP → PREP SAMPLE → APPLY & RUN → REPORT RESULTS

With Connectivity

Consolidate test results, reduce transcription errors and enable faster clinical decisions with LumiraDx Connect, a smart, integrated connectivity platform that ensures easy, secure, real-time transfer of results from the LumiraDx Platform to your patients' electronic records.

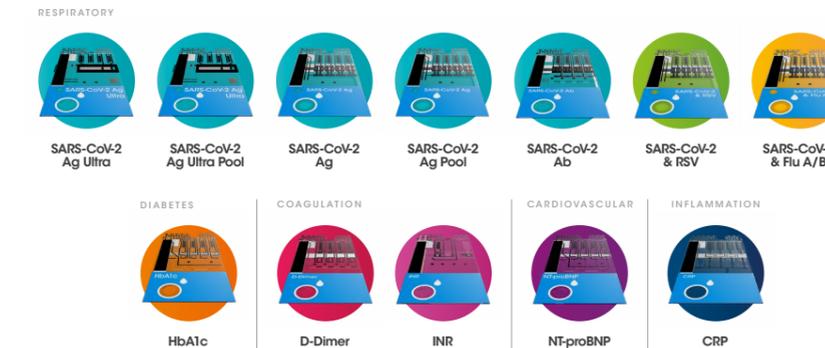

LumiraDx Connect Manager allows the remote management of every LumiraDx Instrument in use at your site.

Multiple Tests

Harnessing the power of actively controlled microfluidic technology, the one-stop Platform has placed a portfolio of tests at the point of need, and an additional 30+ tests in the pipeline capable of running different technologies, including molecular, immunoassay and chemistry.

Delivering real-time, accurate, lab-comparable results in minutes and helping you to make actionable treatment decisions with a diagnostic result at the patient's side.

Not all products available in all countries and regions.

With Active Microfluidic Technology

Each LumiraDx Test Strip has fully controlled, individual channel, active microfluidics technology

How does Microfluidics work?

Find out here >>>

Accurate results, fast

Lab-comparable performance

Next-generation, microfluidic technology providing portable high sensitivity testing with lab-comparable performance results at the point of care.

Rapid clinical decisions

Rapid, actionable, lab-comparable results in as little as 5 minutes to guide appropriate treatment decisions at community, point of care and pharmacy.

Improved patient flow

Real-time results at the point of need to help improve efficiencies and initiate treatment faster. Reduce patient follow up visits, reduce patient wait times and provide the appropriate care pathway to patients sooner.

One Platform, multiple tests

Broad test menu

Designed to deliver multiple tests wherever needed on one single Platform, capable of helping to diagnose infectious diseases, cardiovascular diseases, diabetes and coagulation disorders, with a further 30+ tests in pipeline.

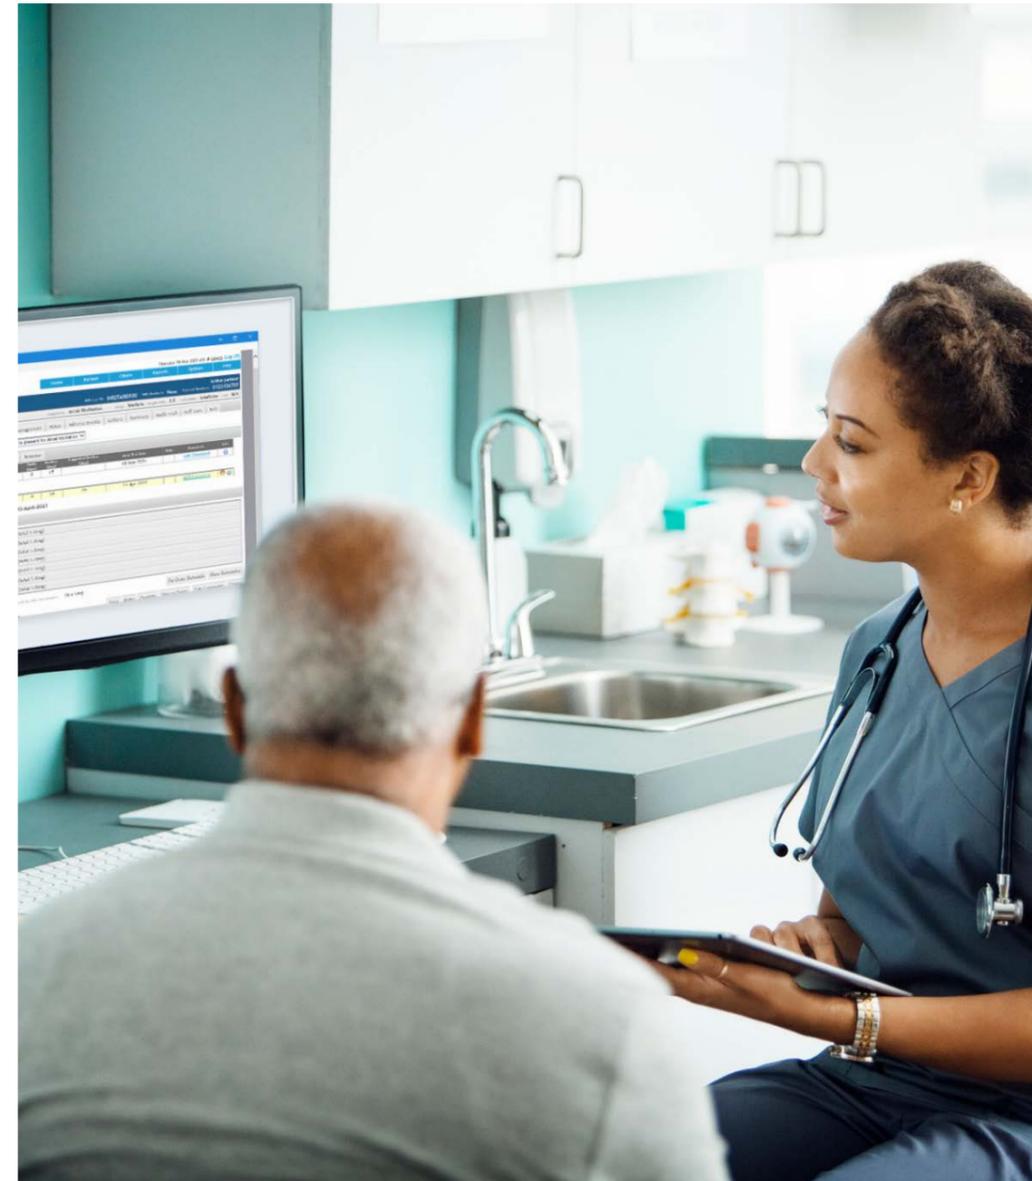

Efficiencies at POC

Rationalize and cost effectively manage your point of care systems, with a single platform. Increased efficiency through simplified training, equipment, maintenance, storage and test supplies.

Improved access to care

A portable lab, compact enough to deliver lab-comparable results almost anywhere. Test in various care settings and move informed real-time clinical decision-making closer to the patient.

Easy to use, minimal training

Single workflow

Multiple tests, one simple on-screen workflow - the single intuitive touchscreen is designed to be easy to use, meaning minimal training, equipment and maintenance is required.

Small sample volumes

Test with easy to retrieve small sampling, including direct fingerstick and swab.

Room temperature storage

Test Strips available straight out of the box with no need for additional storage requirements or costs - freeing up refrigerator space and flexibility to store where most convenient.

Connected, at point of care

Securely collect data anywhere

Smart connectivity to remotely manage and configure Instruments, upload data, view test results, manage and demonstrate policy compliance, and simplify workgroup provisioning securely. Enable faster clinical decisions with a seamless and secure integration into patients' electronic records at the point of care.

Have confidence in your test results.

Onboard intelligence.

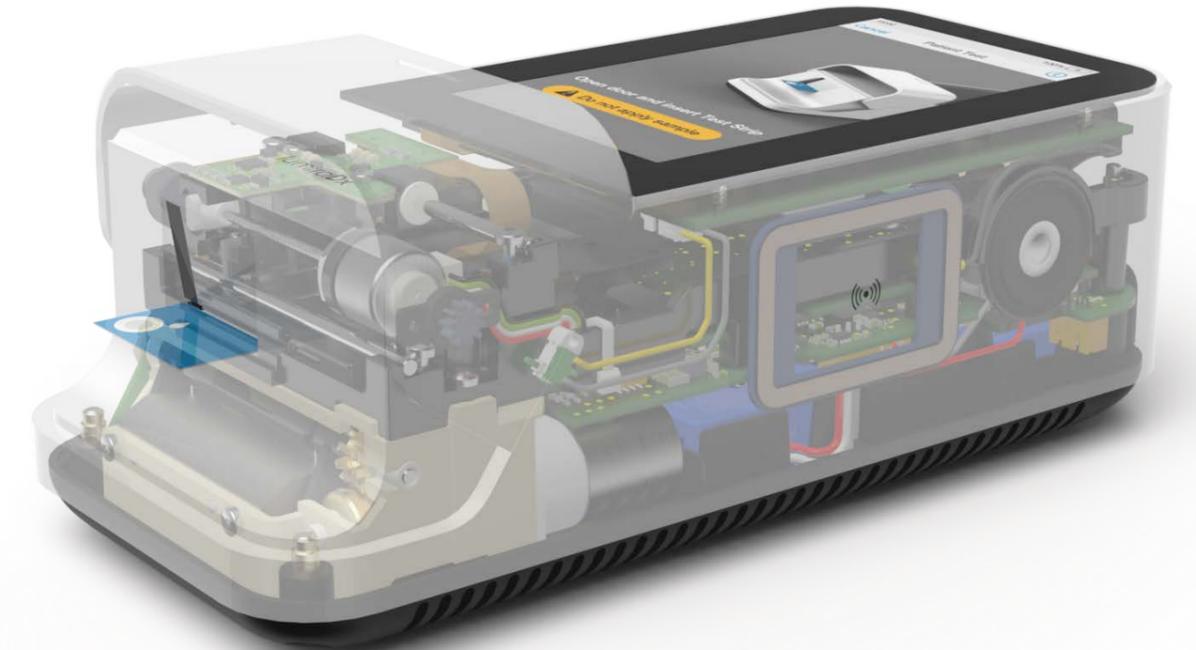

Both the Instrument and Test Strip use a number of analytical electronic quality controls to ensure the integrity and validity of the test, automated functionality checks and Test Strip performance controls are made throughout the operating steps of the test.

Next-generation manufacturing.

The Test Strip manufacturing uses high definition vision systems to ensure the highest quality of manufacture and employs a fully automated strip assembly, reagent deposition, drying and foil packaging for every strip.

With packaging to preserve.

Plus, each Test Strip is individually packaged in a sealed desiccant lined aluminum foil pouch, maintaining a low humidity environment throughout their shelf life, ensuring a consistent out of box performance for all strips.

Working to ensure the future of
diagnostics should be one that
benefits everyone, everywhere.
